SUMMARY

Data Engineer at Itaú Unibanco with hands-on experience in banking data pipelines (distributed ETL/ELT) using Python (PySpark), AWS Glue and Databricks, including data modeling, infrastructure as code with Terraform and strong SQL work. I work directly with banking product data in an environment with high governance and compliance requirements, applying best practices for quality, traceability and reliability at large data volumes. I have applied interest and ongoing study in MLOps and feature stores, and use generative AI daily to speed up experimentation and development. I am recognized for clear communication, collaboration with AI and data science teams, and a mindset oriented towards automation and continuous improvement.

CORE COMPETENCIES

- **SQL and Data Modeling:** complex queries, data modeling and architecture applied to banking analytical pipelines (Athena, Aurora/RDS, Keyspaces).
- **Databricks & Delta Lake:** development of transformation pipelines in Databricks with Spark/PySpark; applied study of cluster strategies and cost and performance optimization.
- **Python for distributed ETL/ELT:** building and maintaining ingestion and transformation pipelines for large data volumes with PySpark and AWS Glue.
- **Orchestration (ADF / Airflow):** familiarity with data pipeline orchestration using tools such as Airflow, with interest in deepening experience in ADF environments.
- **Banking Data Governance and Compliance:** daily work with real business data at a financial institution, applying security, quality and data traceability standards.
- **Banking and Wholesale Product Data:** direct experience with business data at Itaú Unibanco, one of the largest banks in Latin America.
- **AI and Feature Engineering:** Machine Learning Associate and Generative AI Associate certifications (IOX/Itaú); close collaboration with AI teams to accelerate experimentation and model delivery.

PROFESSIONAL EXPERIENCE

Itaú Unibanco — Jr. Back-End Developer (Data Engineer) | April 2025 – Present

- Development of banking data pipelines with AWS Glue and Databricks, using Python (PySpark) for distributed ETL/ELT over large data volumes.
- Data modeling and architecture with SQL on Athena, Aurora/RDS and Keyspaces, supporting analytical and business solutions.
- Provisioning and automation of data infrastructure as code with Terraform, ensuring reproducible and auditable environments.
- Work with real banking product data, applying the quality, consistency and compliance standards required in a regulated environment.
- Asynchronous integration between services with SQS, ensuring decoupling, resilience and safe data reprocessing.
- Collaboration with AI and data science teams, including development and maintenance of REST APIs (Java/Node.js) that support these flows.
- Active participation in code reviews and in defining engineering best practices, focused on readability, maintainability and reliability.
- DevOps mindset: automation, observability and continuous improvement of data pipelines, with automated testing (TAAC framework) and CI/CD.

Itaú Unibanco — Intern | April 2024 – April 2025

- Development in Python and Terraform to manage data resources on AWS Lambda.
- Building and integrating solutions with API Gateway, SQS, Lambda, S3 and ServiceNow.
- Development of APIs following OpenAPI 3.0, focused on contract standardization and integration between systems.
- Application of a DevOps mindset to cloud data infrastructure (AWS).

Digisystem — Back-End and Front-End Developer | December 2021 – December 2023

- Contribution to the FGCSPP project, on customer type segmentation, focused on data quality and reliability.

- Participation in the development of DORA (electronic medical record), focused on data integration, performance and security.
- Intensified studies of AWS Solution Architect and technical certifications related to data and integration.

PERSONAL PROJECTS

- **SmartCart** — mobile app (React Native/Expo) with generative AI applied to store floor plan data analysis (Gemini Vision) and natural language list generation; backend on Supabase.
- **Hive** — personal finance management app, with data modeling for expenses and budget.
- **AI applied to development** — daily use of Claude Code for prototyping, debugging and data engineering; DEVA certification (Cognition) in AI coding agents.

EDUCATION AND CERTIFICATIONS

- Universidade Paulista (UNIP) — B.Sc. in Computer Science — 2021 to 2025
- Machine Learning Associate — IOX (Itaú)
- Generative AI Associate — IOX (Itaú)
- MySQL certifications
- Languages: Portuguese (native), English (advanced)

TECHNICAL SKILLS

- **Data & Big Data:** SQL, data modeling, Databricks (Spark/PySpark), Delta Lake (applied study), AWS Glue, distributed ETL/ELT
- **Orchestration:** Airflow (familiarity), ServiceNow for workflow and incident management
- **Languages:** Python (PySpark), SQL, JavaScript/TypeScript; Java and Node.js at basic level
- **Cloud (AWS):** Athena, Keyspaces, RDS/Aurora, S3, ECS, EC2, SQS, Glue, Lambda, IAM, API Gateway, CloudWatch; Terraform (IaC)
- **Governance & Quality:** best practices for banking data quality and compliance, automated testing (TAAC), CI/CD, code review
- **AI & MLOps:** applied study of feature stores and pipelines for AI; model versioning and observability (concepts)
